

ProofDeck

Stop claiming skills. Start proving them.

A verified, evidence-linked skill portfolio built from a student's real project history — so credibility isn't self-reported anymore.

THE PROBLEM

A resume tells you what someone claims.
It doesn't quickly show you what they actually built.

THE GAP

1

Resume Claim

Polished lines like 'Proficient in ML' or 'Expert in Python' — self-reported, and increasingly easy to produce with AI.

2

Scattered Evidence

Real proof exists — across GitHub repos, commits, Kaggle notebooks, Hugging Face projects — but it's fragmented.

3

Recruiter Uncertainty

No fast, structured way to connect the claim on the resume to the evidence behind it.

When AI makes polished claims cheap, proof becomes valuable.

AI-generated claims

Polished, confident resume language is now trivial to produce at scale.

Trust in self-reported claims

The easier a claim is to write, the less it tells a recruiter on its own.

Demand for evidence

What increasingly matters is proof that can be inspected, not just read.

ProofDeck turns real project history into a recruiter-trusted skill portfolio.

GitHub / Project Evidence

Repos · commits · notebooks · real work

ProofDeck Evidence Layer

Analyzes context, technologies & contribution signal

Structured Skill Profile

Evidence-linked, recruiter-readable signals

Recruiter

Inspects the evidence, not just the claim

Resume = What you claim.

GitHub = What you built.

ProofDeck = The evidence layer connecting the two.

We don't replace the resume.

We make its claims inspectable.

Four steps from raw evidence to a trusted profile.

A recruiter-ready, evidence-backed skill profile.

CONCEPTUAL MVP

DK

Daksh Khandelwal

Applied AI & Data Science · ProofDeck Profile

Python

→ repo: image-classifier-cnn · 42 commits analyzed

EVIDENCE-BACKED

Machine Learning

→ repo: student-risk-predictor · notebook evidence

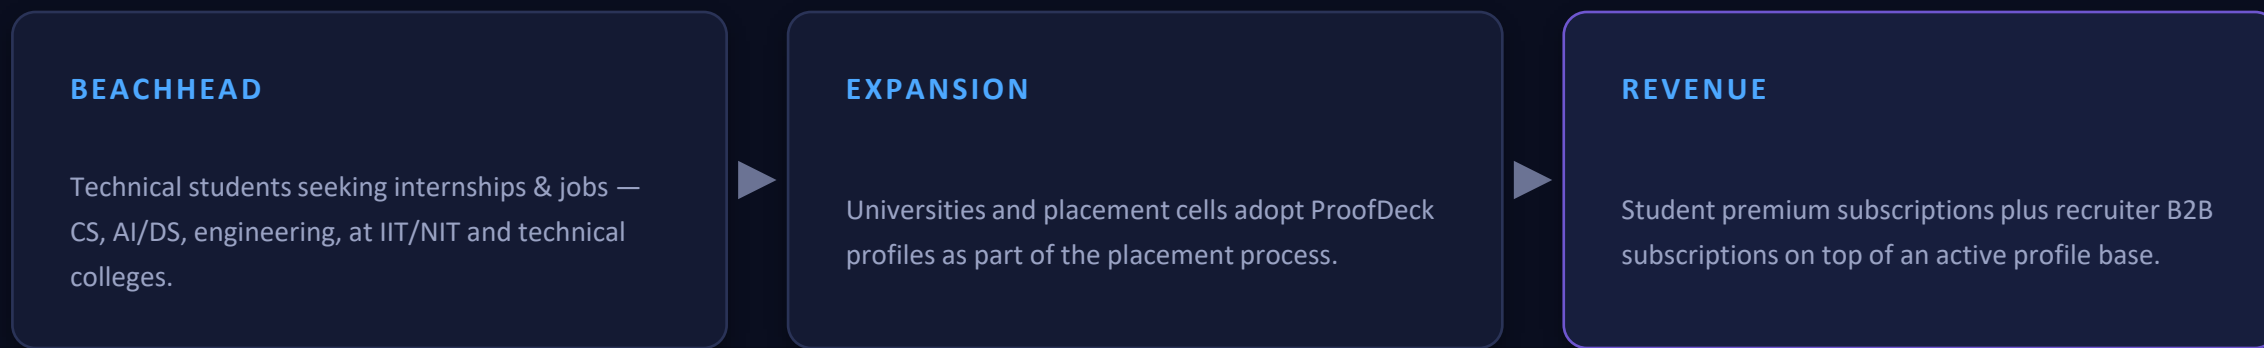

EVIDENCE-BACKED

PyTorch

→ repo: image-classifier-cnn · training pipeline

EVIDENCE-BACKED

From students to the modern hiring stack.

BUSINESS MODEL

Students — Freemium

- Basic ProofDeck profile: free
- Premium analytics & customization: paid

Recruiters — B2B

- Search & filter evidence-backed candidate profiles
- Technical screening support
- Recruiter subscription

ProofDeck is designed as the evidence layer between claims and proof.

	Resume / LinkedIn	GitHub	AI Resume Tools	ProofDeck

Recruiter-oriented	~	—	~	✓
Evidence-linked skill signals	—	—	—	✓

“We don't replace the resume. We make its claims inspectable.”

The future of hiring shouldn't be about
who writes the best claims.

It should be about who can show the best proof.

ProofDeck

Stop claiming skills. Start proving them.
