

EUREKA! 2026 · NATIONAL ENTREPRENEURSHIP CHALLENGE

ProofDeck

Stop claiming skills. Start proving them.

The evidence layer for modern technical hiring.

Daksh Khandelwal

Founder · B.S. Applied Artificial Intelligence & Data Science, IIT Jodhpur

What candidates claim isn't what recruiters can verify.

The gap isn't a lack of proof — it's a lack of a fast way to inspect it.

AI made claims cheap. That makes proof valuable.

AI-generated claims

Polished, confident resume language is now trivial to produce at scale.

Trust in self-reported claims

The easier a claim is to write, the less it tells a recruiter on its own.

Demand for inspectable evidence

What increasingly matters is proof that can be checked, not just read.

ProofDeck connects claims to evidence.

Resume = What you claim.

GitHub = What you built.

ProofDeck = The evidence layer connecting the two.

Four steps from raw evidence to a trusted profile.

A recruiter-ready, evidence-backed skill profile.

EVIDENCE-BACKED

Recruiters inspect evidence, not just the claim.

Recruiter view: filter candidates by evidence-backed skill — not keyword match.

Search & Filter	Technical Screening	Confidence Signal
Find candidates by verified skill, not resume keywords.	Reduce time spent validating self-reported claims.	See exactly which project backs each listed skill.

A focused path from students to hiring infrastructure.

Beachhead

Technical students seeking internships & entry-level roles — CS, AI/DS, and engineering students at IIT/NIT and technical colleges.

Expansion

Universities and placement cells adopt ProofDeck profiles as part of the placement process.

Long-Term Opportunity

Recruiters and technical hiring teams use ProofDeck as evidence infrastructure for hiring decisions.

Three ways ProofDeck can create revenue.

Students

Freemium (B2C)

- Basic ProofDeck profile — free
- Premium analytics & customization — paid tier (illustrative)

Recruiters

B2B Subscription

- Search & filter evidence-backed profiles
- Technical screening support
- Seat-based subscription (illustrative)

Institutions

Future / B2B2C

- Placement-cell dashboards
- Bulk student profile adoption
- Pilot-based pricing (future)

Network effect: more student profiles → more recruiter value → more institutional interest.

The missing evidence layer in technical hiring.

	Resume / LinkedIn	GitHub	AI Resume Tools	ProofDeck
Self-reported	✓	—	✓	—
Real evidence	—	✓	~	✓
Standardized format	✓	—	✓	✓
Recruiter-oriented	~	—	~	✓
Evidence-linked skill signals	—	—	—	✓

“We don't replace the resume. We make its claims inspectable.”

Low-cost distribution through existing student networks.

1

Student Acquisition

Campus tech communities, hackathons, coding clubs, and student ambassadors.

2

Institutional Acquisition

Placement cells, university partnerships, and pilot programs with early-adopter departments.

3

Recruiter Acquisition

Early recruiter pilots with technical hiring teams, building toward B2B subscriptions.

Distribution starts where evidence already lives — inside student project communities.

Value compounds as the evidence graph grows.

Why it scales

Each new student profile adds evidence to the graph; each new recruiter adds demand for that evidence — the two sides reinforce each other.

Defensibility hypotheses (to be tested, not yet proven)

What we've built — and what we need to prove next.

TODAY

- Conceptual MVP demonstrating an evidence-linked skill profile built from real project history.
- Core problem framing grounded in the founder's own experience building and documenting technical projects.
- Product workflow defined: Connect → Analyze → Structure → Share.

NEXT TO VALIDATE

- Student interviews — willingness to connect GitHub and adopt a ProofDeck profile.
- Recruiter interviews — willingness to use evidence-backed profiles in screening.
- Prototype usability testing with real project data.
- Early placement-cell pilot conversations.

Why I'm positioned to build this.

Daksh Khandelwal

Founder, ProofDeck

B.S. Applied Artificial Intelligence & Data Science, IIT Jodhpur (expected 2029)

Hands-on evidence — the same kind ProofDeck is built to surface

Jarvis — AI Voice Assistant

Python voice assistant built from scratch: wake-word detection, speech-to-text/text-to-speech, task automation, and OpenAI integration.

AI-Chat-Automation-Bot

Automation pipeline integrating an LLM API (via OpenRouter) with real-time WhatsApp Web chat handling, built end-to-end in Python.

IPL Performance Analytics

End-to-end Excel + VBA analytics dashboard covering 150 players across 10 IPL teams, with macro-driven interactivity.

“The future of hiring shouldn't be about who writes the best claims.

It should be about who can show the best proof.”

ProofDeck

Making technical skill inspectable.
